EDUCATION

Meerut Institute of Technology, Meerut

Bachelor of Technology in Computer Science

2021 – 2025

Noble Public School

High School (10th)

2018 – 2019

Noble Public School

Intermediate (12th)

2020 – 2021

PROJECTS

LLM-based Medical Chatbot (RAG Architecture) | Python, LangChain, Pinecone

Aug 2025 – Sept 2025

- Developed a Generative AI-powered medical chatbot using Retrieval-Augmented Generation (RAG) to provide accurate and context-aware healthcare responses.
- Implemented document indexing by generating embeddings with Hugging Face models and storing them in Pinecone vector database.
- Integrated LangChain with Gemini LLM to retrieve relevant context and generate precise conversational answers.
- Designed an end-to-end pipeline for data ingestion, embedding generation, semantic search, and response synthesis.
- Deployed the chatbot on Streamlit with a user-friendly interface for interactive medical query resolution.

ATOPREP AI – Placement Prep Bot | Python, Gemini API, Generative AI

May 2025 – June 2025

- Developed an AI-powered chatbot using Gemini API and Generative AI to assist students in placement preparation.
- Integrated 3 functional modes: **Topic Explainer**, **Quiz Generator**, and **Code Debugger with AI suggestions**.
- Used Python to handle API calls, backend logic, and intelligent response generation based on student queries.
- Enabled contextual learning across programming languages, debugging scenarios, and assessment through quizzes.

Heart Stroke Prediction | Python, Numpy, Pandas, Scikit-Learn, Streamlit

June 2024 – July 2024

- Built a GUI-based Heart disease prediction model.
- Performed data cleaning, preprocessing, and handled missing and imbalanced data.
- Conducted Exploratory Data Analysis (EDA) to identify key risk indicators.
- Selected the best-performing model based on accuracy and other performance metrics and deployed using streamlit.

Translator Tool | Python, Tkinter, Google API, NLTK

June 2024 – July 2024

- Built a GUI-based real-time Translator Tool with Python and Tkinter.
- Implemented multi-language support using Google Translate API.
- Used NLTK for text processing tasks like tokenization and stemming to improve translation accuracy.

TECHNICAL SKILLS

Programming Languages: Python, C++, SQL, JavaScript

Data Science Tools: NumPy, Pandas, Matplotlib, Seaborn, scikit-learn, Hugging Face

AI/ML: Generative AI, Agentic AI, Machine Learning, Gemini API, NLP, LLM

Frameworks: React, Tkinter, LangChain, LangGraph

Tools & Platforms: Git, GitHub, Postman, VS Code, Docker

Core Subjects: Data Structures, OOP, OS, DBMS, Computer Networks

ACHIEVEMENTS

- 4-star coder on HackerRank in C++
- 4-star in Python on HackerRank
- 3rd rank in college CES society coding event
- Solved 200+ problems on LeetCode
- Solved 400+ problems across platforms including HackerRank and CodeStudio
